Woodfab Structures Ltd is an ISO 9001 certified company that offers a fast and efficient service, and has the technical ability to offer a solution to any fencing requirement. Our acoustic barriers are manufactured to meet the European Standard EN14388 for road traffic noise reducing devices, which is mandatory on all government contracts across Europe. Our acoustic barriers are designed for use in domestic, industrial and motorway applications and meet with all the relevant statutory requirements in regard to manufacturing acoustic panels and timber treatment to EN 435 standard. Noise control is a key environmental issue and our range of barriers will provide solutions in many locations such as those adjacent to bus depots, railways etc. Our boundary fencing, under the BUAN range, has been developed to provide decorative, robust, visual screening for both domestic and industrial applications. We ensure that all of the timber for our products is sourced from sustainably managed forests. Visit website [www.woodfabstructures.ie](http://www.woodfabstructures.ie)
